

S3.5.4 ISO 16890 - Finally an International Air Filtration Test Standard

Bob Burkhead

Blue Heaven Technologies

The promulgation of ISO 16890 has been several years in the making and shows how a true consensus seeking effort can actually come to fruition. The presentation highlights the unique blend of test methods and protocols being proposed for this global application.

A "close up" review of the specifics will be outlined as well as the logic behind the way expectations were set during the formative portion of the documents development. Formal publication is scheduled before the end of 2016 - so the questions and answers generated may help set the stage for the way the standard could be accepted into the community.
